

What AVDR can do for you:

The AVDR has been created to assist fleet managers, operators and drivers in making their operation as efficient, safe and cost effective as possible.

- Reduce fuel cost and save on fuel
- Reduce insurance premiums
- Reduce off-the-road costs
- Reduce maintenance costs
- Improve productivity
- Enhance health and safety
- Track you vehicle and cargo
- Live fault code diagnosis

VIDURA

4 CAMERA EXPANDABLE SYSTEM

A NEW MODULAR FULLY EXPANDABLE SYSTEM TO
TRACK, SECURE AND PROTECT YOUR DRIVERS AND VEHICLES.

Insurance

and Loss Prevention

With Cash for Crash at an all-time high and an annual estimate spend £392 million, it is no wonder that many fleets are looking into camera systems to back up their trusted drivers and defend against staged accidents.

Our 4 camera system removes many blind spots from the vehicle. Using wide angle lenses our system can monitor “accident hot zones” around your vehicle.

Due to our modular design we can also monitor trailer temperature, reducing operating costs by assisting in the prevention of spoiled refrigerated goods.

Delivery operations can also be streamlined and safeguarded through the use of door sensors which can trigger a delivery event.

With the combination of goods monitoring and incident tracking we can help to reduce your insurance premiums.

CANBUS

Fault Code Monitoring and add ons

As engines become more advanced, there are more fault codes that can trigger warning lights, resulting in lost operational time and costly replacement trucks. Our system can monitor these in real time, giving you the fastest notification time and allowing you to make preparations before the truck breaks down or is damaged.

With the fault codes going directly to your team, you are able to arrange and repair work before the vehicle is back, saving valuable time.

Our modular system also allows for add ons to be attached to the system, creating a solution that is customized completely to your needs:

- Tachograph recording
- Door sensors
- Tyre pressure sensors
- IR Temperature sensors/CO 2 sensors for continental trips

Vehicle Tracking

Driver Safety and Behavior Analysis

With many fleets utilizing temporary agency drivers, it is paramount to know where these individuals are at all times to avoid fraud and time wasting behavior, as well as monitoring when a driver is with their vehicle or not.

Our system can track your vehicle all over the world, allowing you to see when a driver goes off course, for whatever reason, giving you true peace of mind.

The system also helps the driver, providing them with a panic button and manual incident trigger if they are concerned or need assistance.

Our system consistently monitors various parameters as well, so you can even monitor the behavior of your drivers, allowing you to save money and reward those doing your company proud.
